

June 11, 2008

The Honorable Debbie Stabenow
United States Senate
Washington D.C. 20510

Dear Senator Stabenow:

We are writing to thank you for your leadership in promoting the key benefits that offsets, particularly agriculture and forestry offsets, can provide in addressing greenhouse gas emissions reductions. Offsets projects are critical to ensuring that any legislation to address global climate change can achieve meaningful environmental results in a cost-effective manner. In addition to these economic benefits of emissions offsets projects, they can help drive new technologies and services, and provide extensive environmental benefits.

Your amendment to the Climate Security Act (S. 3036) provides a useful framework for developing offsets policy that will engage agriculture and forestry interests, utilities and industry seeking to reduce their emissions, entities that finance and develop offset projects, and environmental groups. We look forward to continuing to work with you and your staff to craft a robust, sustainable, offsets policy that efficiently reduces costs and maintains environmental integrity.

Sincerely,

Agricultural Carbon Market Working Group
